

MCHAT Online

The MCHAT is the Modified Checklist for Autism in Toddlers. This can be completed for a child between 16-30 months of age. It is designed to identify toddlers at risk for social and communication deficits commonly seen in autism spectrum disorders. The checklist itself is not diagnostic; it provides valuable clinical information to be shared with a health care provider to determine the type of clinical assessment needed.

Click on the following link to complete the MCHAT online. Please print your results and bring them with you to your office visit.
